

Dose Rates in Contaminated Rooms of Various Sizes

K. F. Eckerman

Introduction

There is a need for dose coefficients which could be used to estimate anticipated dose rates within radiologically contaminated structures. Coefficients for evaluation of the intake of radionuclides published by the International Commission on Radiological Protection (ICRP 2001) are applicable to the inhalation and ingestion exposures; however ICRP has not published, with the exception of radionuclides of the noble gas elements, dose coefficients for exposure to radionuclides located outside the body. The US Environmental Protection Agency (EPA), in Federal Guidance Report 12 (EPA 1993), tabulated dose rate coefficients for exposures to radionuclides distributed in air, water, soil and on the surface of the ground. These coefficients were calculated for idealized exposure geometries of infinite dimensions (semi-infinite source in air, infinite planar source on the ground, etc.). We develop here the relationship between the dose rate coefficients for exposures in a contaminated room and dose rate coefficients for an infinite source using the air kerma rate one meter above the floor as the normalization quantity. The floor, walls and ceiling of the rooms are assumed to be contaminated to the same level.

Methods

Air kerma rates were calculated for monoenergetic photon emitters at 1 m above the floor on a 19 by 19 grid in the rooms of various sizes. The calculations involve an integral of a dose kernel over the surfaces of the room. The kernel for the kerma rate, $\dot{D}(r, E)$, at distance r from a point source of photons of energy E is given by

$$\dot{D}(r, E) = \frac{1}{4\pi r^2} (\mu/\rho)_T E e^{-\mu r} \quad (1)$$

where $(\mu/\rho)_T$ and μ are the mass energy transfer and linear attenuation coefficients, respectively in air for photons of energy E (Berger *et al.* 1999). The kernel of Eqn (1) does not include a contribution from scattered photons; i.e., no photon buildup factor is included in the equation as buildup over the dimensions of the room is negligible.

The dose rate 1 meter above the floor at locations (x, y) can be expressed as the integral of the dose kernel over the surfaces of the floor, ceiling, and walls. The dose rate at location (x, y) , $\dot{D}(x, y, E)$, for photons of energy E is give by

$$\dot{D}(x, y) = \int_S dS_a S_a \dot{D}(r, E) \quad (2)$$

where S_a is the activity of the contamination per unit surface area, r is given as $r = |(x, y, 1) - \vec{r}_S|$; vector \vec{r}_S is the location of the point sources in the integrand that is evaluated over surfaces S . Eqn (2) was evaluated at 361 locations (a 19 by 19 grid) within the room and normalized to the dose above an infinite plane.

The dose rate $\dot{D}_P(h, E)$ at height h (here taken as 1 m) above an infinite plane with surface aerial contamination S_a emitting photons of energy E is given by

$$\dot{D}_P(h, E) = \frac{S_a (\mu / \rho)_T E E_1(\mu h)}{2} \quad (3)$$

where $E_1(x)$ is the first-order exponential integral function (Shultix and Faw 1996). The $E_1(x)$ function is evaluated using the formulations given by Abramowitz and Stegun (1964). The relative dose rate, $R(E) = \dot{D}(x, y, E) / \dot{D}_P(h, E)$, was evaluated at 361 locations, the 19 x 19 grid, in the room. In addition to the average value, calculations were also made for locations at the center of the room, at the mid-point along the wall and at a location in the corner of the room.

Results

Calculations of the relative dose rate were carried out for 5 rooms; a) 10 x 10 x 10, b) 50 x 50 x 10, c) 100 x 100 x 10, d) 200 x 200 x 20, and 400 x 400 x 40 ft for photons of energy between 10 keV and 10 MeV. Maps of the relative dose rate inside a small room (10 x 10 x 10 feet) and a large room (400 x 400 x 40 feet) for 100 keV and 1 MeV photons are shown in Figs. 1 – 4. The relative dose rate as a function of photon energy are shown in Figs 5 - 8 for the various locations in the rooms.

The relative dose rate was evaluated for the radionuclides of FGR 12 using the nuclear decay data of ICRP Publication 38 (Eckerman *et al.* 1994) and the responses indicated in Figs 5-8. The relative dose rate for a radionuclide was computed as

$$R = \frac{\sum_{i=1}^n Y(E_i) R(E_i) D_P(h, E_i)}{\sum_{i=1}^n Y(E_i) D_P(h, E_i)} \quad (4)$$

where $Y(E_i)$ is yield of photons of energy E_i in the decay of the radionuclide (Eckerman *et al.*, 1994), $R(E_i)$ is the responses shown graphically in Figs 5-8 for the room and location of interest for photons of energy E_i and $D_P(h, E_i)$ is the dose rate for an infinite plane source emitting photon of energy E_i as given by Eqn 3. Note, the responses $R(E_i)$ of Figs 5-8 were normalized to $D_P(h, E_i)$. Table 1-5 lists the relative dose rate for the radionuclides. Note, if the radionuclide does not emit photons (e.g., H-3) then a zero value for the ratio appears in the table. However, for higher energy beta emitters a potential contribution due to bremsstrahlung was considered (average energy taken as 150 keV). Radionuclides with “+D” appended to their name include the contribution from members of the decay chain (so-called daughters) to ratio specific for the parent radionuclide. These ratios reflect the status of the decay chain at 100 y, however they are normalized to a unit activity of the parent.

It is recommended that an applicable dose rate coefficient for a room with surface or volume contamination of the walls be approximated by multiplying the external dose coefficients of FGR 12 (EPA 1993) by the relative dose ratio given in Table 1-5. This procedure should yield a conservative estimate of the dose rate.

Dose Rate Relative to Infinite Plane (100 keV)

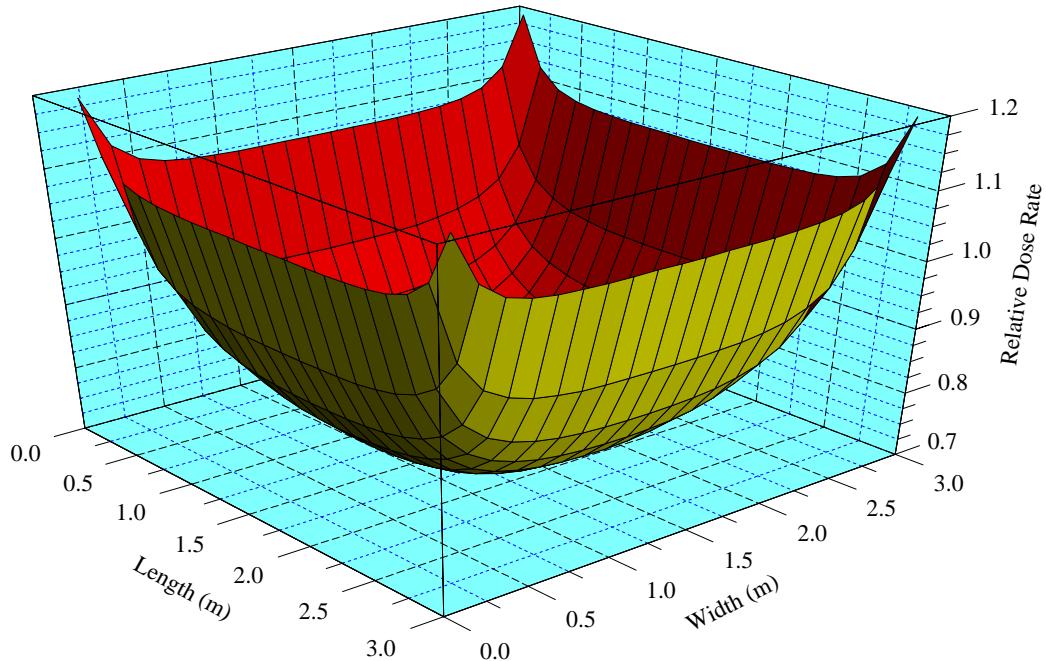

Fig. 1. Photon dose rate inside small room (10 x 10 x10 ft) for a 100 keV source.

Dose Rate Relative to Infinite Plane (1.0 MeV)

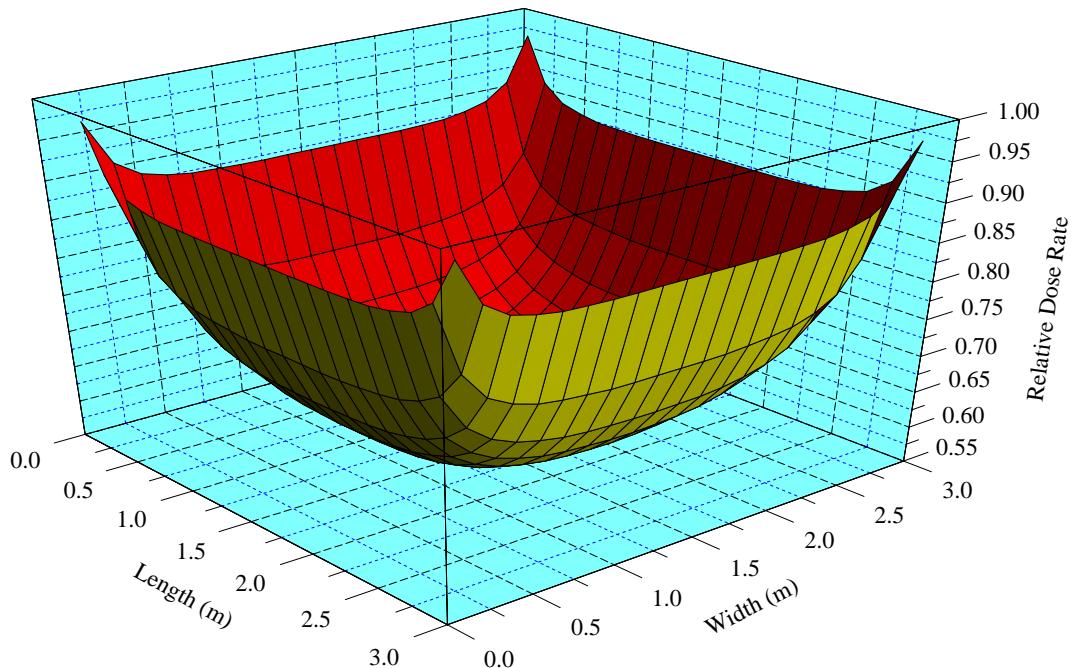

Fig. 2. Photon dose rate inside small room (10 x 10 x10 ft) for a 1 MeV photon source.

Dose Rate Relative to Infinite Plane (100 keV)

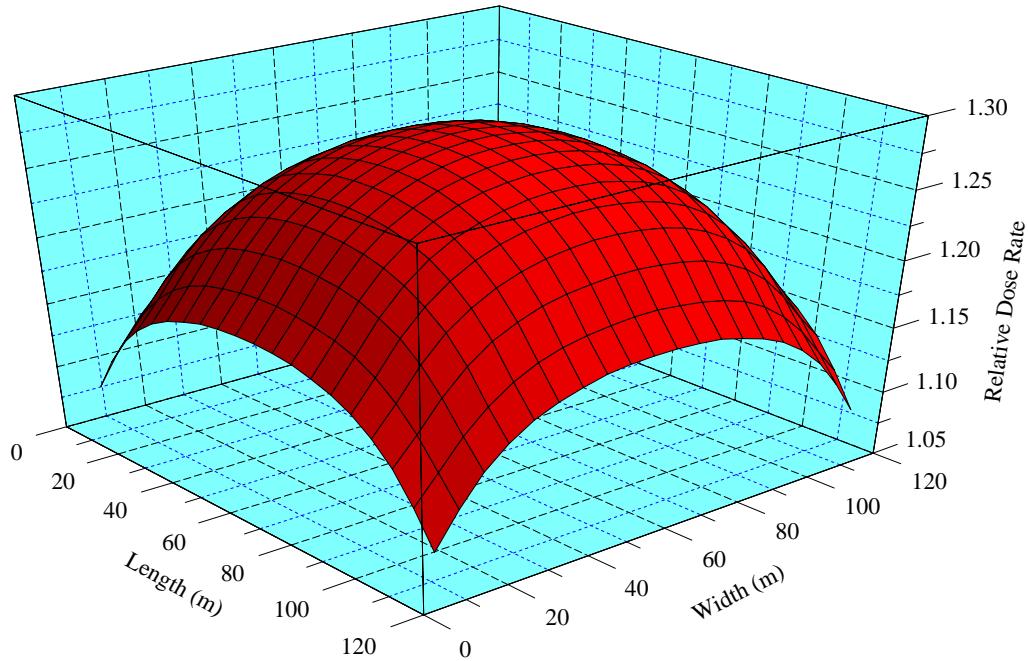

Fig. 3. Photon dose rate inside large room (400 x 400 x40 ft) for a 100 keV source.

Dose Rate Relative to Infinite Plane (1.0 MeV)

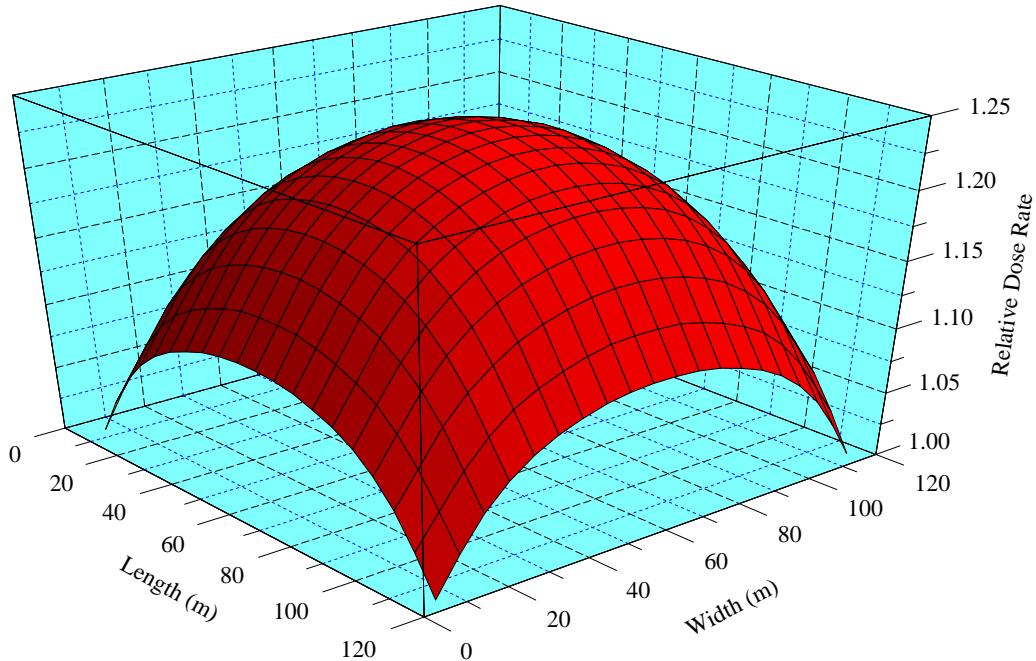

Fig. 4. Photon dose rate inside large room (400 x 400 x40 ft) for a 1.0 MeV source.

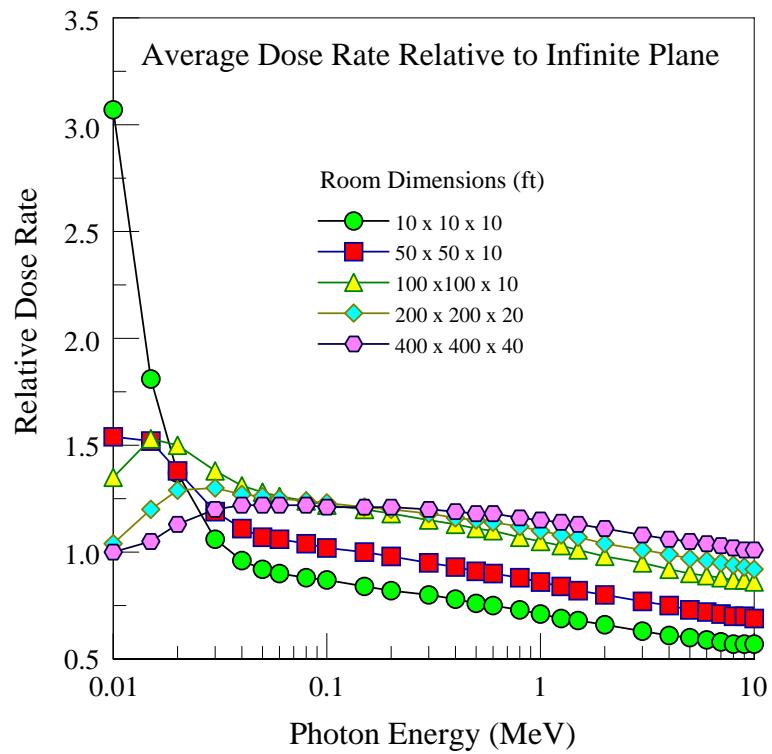

Fig. 5. Average relative photon dose rate for various size rooms.

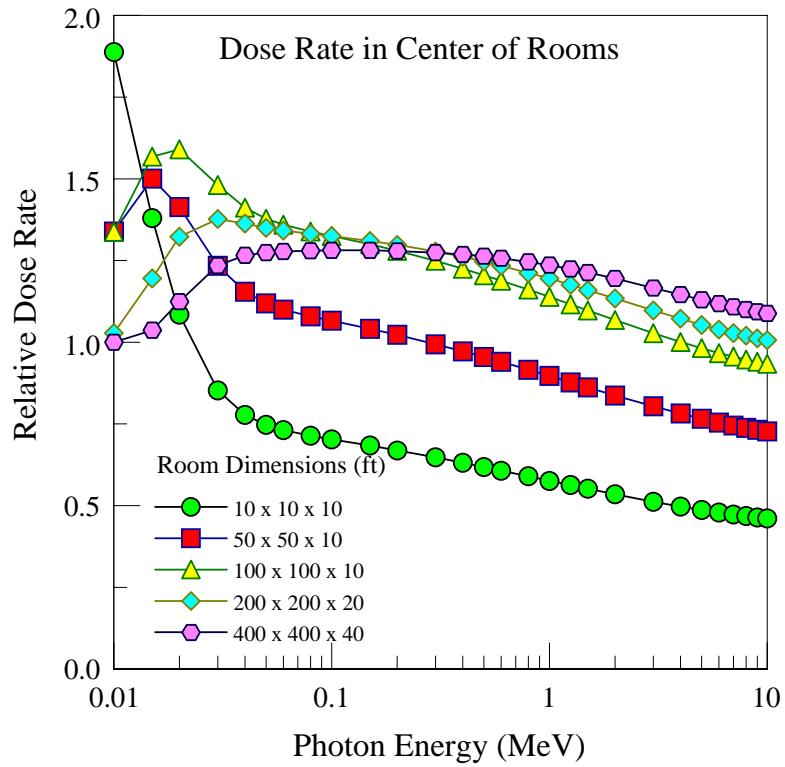

Fig. 6. Relative dose rate in center of rooms of various size.

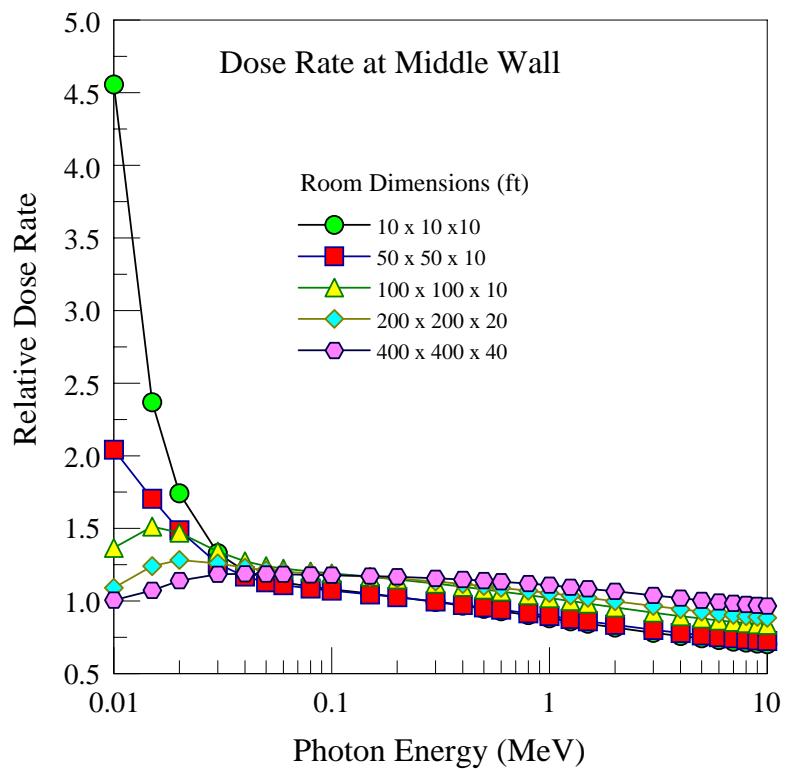

Fig. 7. Relative dose rate at middle of wall location in rooms of various size.

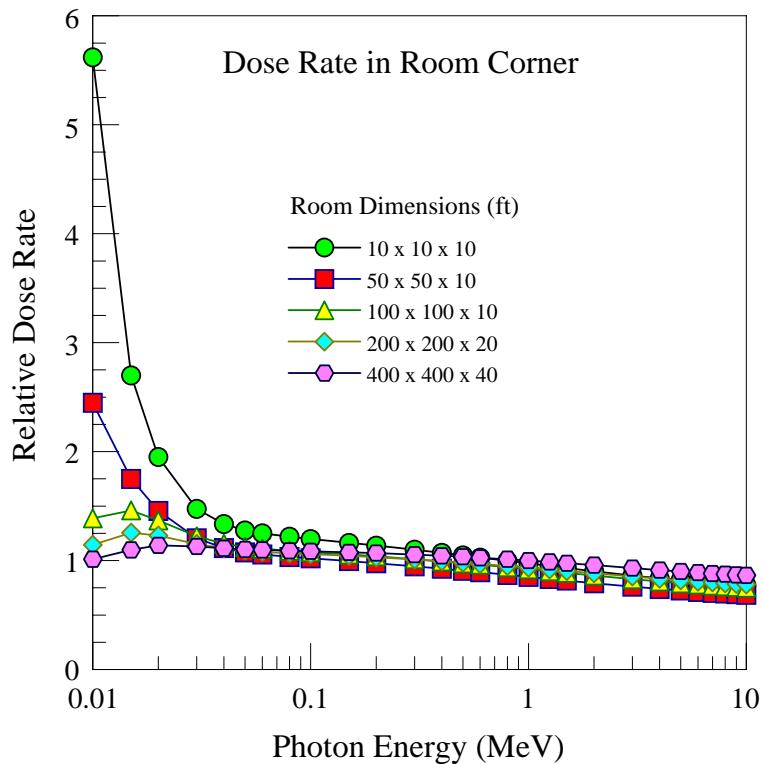

Fig. 8. Relative dose rate in the corner of rooms of various sizes.
